

TEN FRAMES

MATH GAMES TO PLAY AT HOME

Practice Math Facts Using Playing Cards

Give your flash cards a rest and practice facts with math card games instead. Simply lay down two cards from the deck (remove the face cards first) and add, subtract, or multiply them. Students can work on this alone, or you can make it a contest to see who can call out the correct answer first.

BUILDERS PARADISE

To play builder's paradise, discard the face cards and lay out the 4 sevens in a deck side by side. In each round, players work to add the next higher or lower number in each suit, trying to be the first to get rid of all their cards.

Total of 10

Play this math card game alone or as a team. Lay out 20 cards on the table (leave out face cards or change them to equal 0, while aces equal 1). Kids remove sets of cards that add up to 10, ultimately trying to remove all the cards from the table. It's harder than you think!

Fast Facts

1. Deal out half the cards to each player with the cards facing down in a pile.
2. Both players take the card on the top of their pile and lay it face up in the middle.
3. The first player to call out the product of the two cards wins both cards.
4. If it is a draw the cards are left on the table. Turn 2 more cards over and whichever player wins, picks up all the cards in the middle.
5. The winner is the player with the most cards once all the card have been used.
