

Acute Angle	Right Angle	Obtuse Angle
 <p>An acute angle measures between 0° and 90°. It is smaller than a right angle.</p>	 <p>A right angle measures 90°.</p>	 <p>An obtuse angle measures between 90° and 180°. It is larger than a right angle.</p>

The charts below show how to classify a triangle by its angles and sides.

The short lines on the sides of a triangle show that these sides are congruent (equal in length).

Classify Triangles Using Sides		
 <p>Scalene Triangle: no congruent sides</p>	 <p>Isosceles Triangle: at least 2 congruent sides</p>	 <p>Equilateral Triangle: 3 congruent sides</p>

Classify Triangles Using Angles		
 <p>Acute Triangle: 3 acute angles</p>	 <p>Right Triangle: 1 right angle</p>	 <p>Obtuse Triangle: 1 obtuse angle</p>
