

October 23<sup>rd</sup>, 2019

Good afternoon,

Here is the latest Math update for 8D, 8E, 8G & 8H:

**EVALUATIONS:**

On Tuesday October 22<sup>nd</sup> (Wednesday 23<sup>rd</sup> for 8D), your child should have brought home his/her “Math Evaluations” folder in their communication folder. Unless he/she was absent somewhere along the way, your child had three new evaluations added to the folder (total of 5: 3 on left side, 2 on right side):

- LEFT SIDE (REVIEW)
  - Mini-quiz on Prime and composite numbers
- RIGHT SIDE (grade 8 material)
  - Mini-quiz 1 (up to #6 in section N of the binder)
  - Mini-Quiz 2 (up to #11 in section N of the binder)

\*\*\* They have known for quite some time but, in case they forgot to tell you, all four classes will write their **SUMMATIVE ASSESSMENT (Unit test) on Square Number and Square Roots (everything in Section N of the binder) on Monday October 28<sup>th</sup>**. Each class will have had three review periods by that time. In the “Révision” section of their binder, there are three pages of questions that they can practice with detailed answers in the sample binder in class for them to check their work at any time.

Extra help is available days 1 and 3 during Options – many students have been attending and working diligently; very proud of them 😊

**MANGAHIGH.COM:**

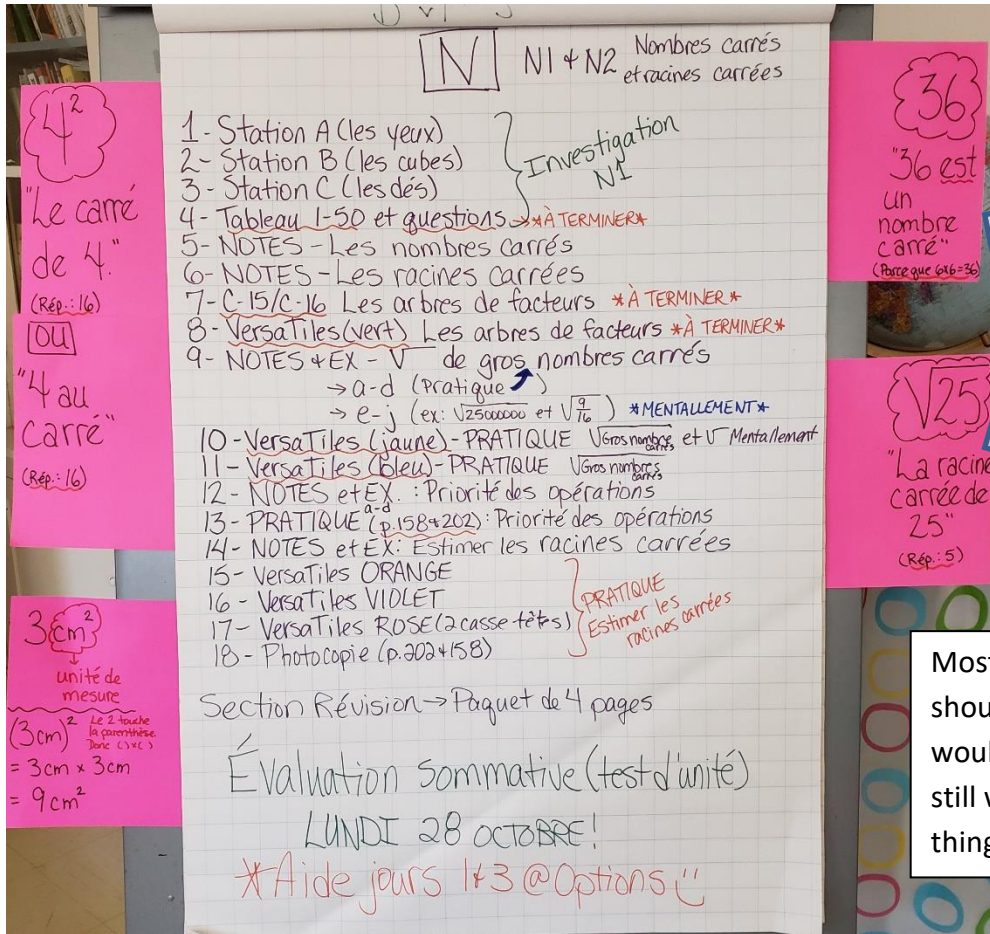

All students have been provided with a “UserID” and “Password” for the website MangaHigh.com. I have encouraged them to take a picture with their phone (or other device) in case they lose their info. I keep a copy in my classroom as well.

They have all had at least two class periods to log in and work on the list of “teacher assigned” tasks. They have a photocopy of the list in their binder but I have also posted it on the school website for their/your convenience. On the second page, there are lots for other great practice websites listed that could be helpful which preparing for their upcoming test.

Students can login to MangaHigh.com anytime they want; all they need is internet access. Although the games are fun, anytime they login, the priority should always be to complete the “assigned” tasks before exploring other topics and/or games.

**BINDER:**

I have helped organize a few student binders recently; here is what ‘should’ be in your child’s Math binder (Section N):

On both sides of the list, you will see some vocabulary that we often referred to during the unit. Students sometimes struggle with the wording when it comes to square numbers and square roots.

Most pages (other than the review) should be complete by now but it would be reasonable if your child is still working away on the last few things (15 to 18).

Thanks for your support and have a great evening!

Lise :)
