

New Brunswick Student Wellness Survey 2015-2016

Results for:
Grades 6-8 Students
Grades 9-12 Students
Grades 6-12 Students

The New Brunswick Student Wellness Survey: Feedback Report provides highlights of major findings related to key provincial indicators that are considered crucial for monitoring student wellness behaviours and for developing a culture of well-being in our province.

The New Brunswick Student Wellness Survey (NBSWS) is a provincial initiative of the Department of Social Development – Wellness Branch, in partnership with the Department of Education and Early Childhood Development and the New Brunswick Health Council (NBHC). The purpose of the survey is to examine the health and wellness attitudes and behaviours of students. The data was collected from 38,573 grades 6-12 students across 183 public schools in New Brunswick. All numbers listed in the tables are presented as a percentage of students, unless otherwise stated.

INTRODUCTION

About the New Brunswick Student Wellness Survey

The New Brunswick Student Wellness Survey (NBSWS) was initiated in 2006-2007 as a provincial initiative through the Wellness Strategy to collect and analyze data and to mobilize knowledge around the well-being and behaviours of children and youth in the province. These surveys have followed a 3-year cycle as illustrated in the table below.

SURVEY	GRADES	SURVEY COMPLETED BY	SURVEY PERIOD
Student wellness survey	Grades 6 to 12	Students	2006-2007 2009-2010 2012-2013 2015-2016
Elementary student wellness survey	Kindergarten to Grade 5	Student version: Students in Grades 4 and 5 Family version: Parents of students in Kindergarten to Grade 5	2007-2008 2010-2011 2013-2014 2016-2017 (to come)

This survey provides the foundation for New Brunswick’s Wellness Strategy 2014-2021, The Heart of our Future, which aims to enhance quality of life for all. Two key outcomes were identified in New Brunswicks’ Wellness Strategy:

- Healthy and resilient people
- Healthy and resilient environments

The NBSWS has evolved to become simpler yet more comprehensive. The questions in the survey address six key themes: learning, social and emotional development, participation and engagement, healthy lifestyles, safety, and health status. These themes touch on topics like students perceptions about learning, healthy eating, physical activity, tobacco-free living, substance use, mental fitness and resilience, volunteering, participation in activities, and injuries.

Why Student Wellness is Important to Academic Development

The relationship between wellness and education is a two-way mutually supportive one. Research has observed a negative correlation between risky health behaviours and health status and education (academic achievement and performance) (Suhrcke & de Paz Nieves, 2011). While risk factors contribute to the development or worsening of undesirable health conditions, protective factors are the opposite. For example, healthy eating is a protective factor for obesity (and other conditions), while smoking is a risk factor for lung cancer (and other conditions). To maintain health and well-being of students, it is essential to not only better manage risk factors, but also to foster protective factors. In fact, focusing on protective factors can help to effectively manage risk factors and reduce the development of health conditions, thus improving conditions for healthy learning and academic performance.

The information contained in this report is provided to assist with the prioritization, development and implementation of initiatives that promote wellness attitudes and behaviours among students. When such reports are broadly shared with health and wellness stakeholders and service providers, as well as parents, district-level personnel, and business, non-profit and civic leaders, etc., new partnerships and supports can be secured.

The NBSWS reports provide a unique opportunity to reinforce the importance of wellness to student learning. Current research provides evidence of positive associations among various aspects of wellness and measures of students' academic readiness, engagement and success. For example:

HEALTHY EATING: Eating breakfast every day can help improve concentration, and increase students' potential to learn (Public Health Agency of Canada, 2009). Body mass is an important indicator of scholastic achievement, attendance, behaviour and physical fitness (Shore, Sachs, Lidicker, Brett, Wright, & Libonati, 2008).

PHYSICAL ACTIVITY: Active and healthy students have increased levels of concentration, relaxation and focus. Participation in physical activity is positively related to academic performance in young people (Singh, Uijtdewilligen, Twisk, J.W.R., van Mechelen, & Chinapaw, 2012).

TOBACCO USE: There is an association between tobacco use and low academic achievement and motivation in students; students who use tobacco tend to have lower academic grades than their peers (Morrison & Peterson, 2010). "Adolescents who do well in school are less likely to smoke." There is an association between academic achievement and rates of smoking initiation (Morin, Rodriguez, Fallu, Maiano, & Janosz, 2012).

MENTAL FITNESS: The satisfaction of mental fitness needs (competence, relatedness and autonomy) in the educational context has been associated with a range of positive personal and academic outcomes, including enhanced academic self-esteem and engagement, increased scholastic confidence and performance, and decreased likelihood of dropping out of school (Morrison & Peterson, 2010).

A Comprehensive Approach to School Health

The Joint Consortium for School Health (JCSH) promotes the Comprehensive School Health Framework to address both the academic development and wellness of students. The framework emphasizes the need for planning and implementing whole school approaches that incorporate key wellness perspectives and practices across four domains:

- Social and physical environment
- Teaching and learning
- Healthy school policy
- Partnerships and services

To learn more about the Comprehensive School Health Framework and the Joint Consortium for School Health, please visit www.jcsh-cces.ca.

This report is a valuable source of information for planning initiatives using a Comprehensive School Health Framework. The survey outcomes detailed in the report may assist in identifying areas of strength on which to build, as well as priority wellness areas that require further attention or promotion.

Students can use the results to:

- Relate the results to curriculum concepts being taught in the classroom
- Engage in dialogue about the results to seek solutions and create student-driven action plans
- Participate in planning activities for programs like the School Wellness Grant
- Organize a school-based action team or student wellness club
- Help organize new initiatives (e.g., start an intramural program, hold a health fair, create a video, develop a presentation, or explore health behaviours of another country)
- Share and use the data in class, at home and in the community

Parents and communities can use the results to:

- Plan activities with students, staff, community members and the Parent School Support Committee (PSSC) or Home and School Association (HSA)
- Model healthy behaviours and support the adoption of healthy behaviours
- Share their skills, talents and expertise to support the school and the community
- Work with community groups to help address identified issues

School staff can use the results to:

- Communicate outcomes with students and staff and the Parent School Support Committee (PSSC) or Home and School Association (HSA)
- Incorporate wellness objectives into School Improvement Plans
- Develop class assignments and activities
- Engage students in planning and delivering wellness activities
- Create opportunities for staff to model healthy behaviours
- Support requests for funding (e.g., School Wellness Grant program)
- Support the development, monitoring and implementation of healthy school policies
- Enhance delivery of services or programs for students (e.g., counselling, breakfast program)
- Form new partnerships with parents and the wider community to take collective action
- Implement and evaluate actions to promote wellness

This year's Grades 6-12 feedback report

In 2015-2016, over 38,000 students from 183 public schools participated in the survey, as compared to over 35,000 students from 177 schools in the 2012-2013 survey. Each participating school receives a personalized school feedback report. Wherever possible, icons are used to describe the nature of the indicators (whether they describe individual, family, school, or community characteristics), and whether the indicators touch on risk or protective factors.

Legend

It's important to keep in mind that:

- The questionnaire used in the survey this year underwent changes (some questions were removed or amended, other questions were added). Questions were validated for trending, but due to possible variations in response rates and changes in methodology or definitions, caution always needs to be exercised when attempting to compare the results of the Student Wellness Survey 2015-2016 with previous years' results.
- In order to give schools enough time and flexibility to administer the survey, the time frame was over a 7 months period (November 2015 to May 2016). As a result, the responses to some questions (e.g. modes of commuting to and from school) might have been influenced by seasonality.

THE NEW BRUNSWICK STUDENT WELLNESS SURVEY DATA IN ACTION

The results of the New Brunswick Student Wellness Survey are shared through various means:

1. School feedback report provided to each participating school with numerous indicators showing the school's results in comparison to the New Brunswick average
2. Educational districts data: Detailed data files with all the information shared in the School Feedback Report disaggregated by the seven education districts
3. Special groups reports: Disaggregation of the indicators by groups of interest:
 - i. Anglophone and Francophone sectors
 - ii. Gender/ sex analysis
 - iii. Students who self-identified as aboriginal
 - iv. Immigrants
 - v. LGBTQ (Lesbian, gay, bisexual, transgender and queer)
 - vi. Students with learning exceptionalities or special needs
 - vii. Alternative Learning Centers
 - viii. First Nations schools
 - ix. Students with food insecurity (reflection of lower economic status)
4. "At a glance" provincial summary report:

Provincial reports on the health and well-being of New Brunswick children and youth (e.g. the Children and Youth Rights and Well-being Snapshots) have used this data to monitor the status and needs of this age group. As a result, a governmental committee was established addressing "Harm Prevention" and the group relies on indicators generated from the Student Wellness Survey.

At a more local level, key indicators from the NBSWS were embedded within the "My Community at a Glance" community profiles produced by the New Brunswick Health Council, and that provided important information for local governments, Non-Government Organizations (NGOs), and Regional Health Authorities (RHAs) as they plan for services and projects to support community needs.

Having noticed any of the following in school in the last 12 months

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
A breakfast program	50	51	51
A fruit and vegetable snack program	16	14	15
Healthy foods sold at sporting events or special food events (e.g., dances and movie nights)	18	11	14
Healthy foods or non-food items sold for fundraising	16	13	14
Healthy foods offered in vending machines and at canteens	17	18	18
Healthy foods offered at cafeteria or in hot lunch program	46	40	43
Information in your cafeteria about how to make healthier food choices	14	10	12
Lower prices for healthier foods	8	3	5
School staff (teachers, custodians) show a positive attitude towards healthy living and health-related issues	43	27	34

PHYSICAL ACTIVITY

Physical activity

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
Students meeting the guideline on 60 min of Moderate or Vigorous Physical Activity (MVPA) daily	27	18	22
Students who spend more than 2 hours per day of screen time	53	70	63

Commuting to and from school (Results might have been influenced by seasonality)

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
Actively (e.g., walk, bike, skateboard)	9	6	7
Inactively (e.g., Car, bus, public transit)	72	81	77
Mixed (actively and inactively)	19	13	16

Number of Physical Education classes in the last 5 school days at school

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
0 classes	6	68	43
1 class	14	4	8
2 classes	46	3	20
3 classes	23	4	12
4 classes	6	4	5
5 classes	6	18	13

Participation in before school, noon hour, or after school physical activities organized by your school (e.g. intramural, non-competitive physical activities)

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
Yes	53	31	40
None offered	4	4	4

Participation in competitive school sports teams that compete against other schools (e.g. junior varsity or varsity sports)

	Grades 6-8 %	Grades 9-12 %	Grades 6-12 %
Yes	40	35	37
None offered	4	2	2
