

Reduce Radon

Reducing radon levels in your home
... for your children's health.

Radon is a harmful gas that comes from uranium in the ground. Radon gas can move into your home through cracks or gaps in the foundation. You can't see it, taste it or smell it. Almost all homes have some radon.

High levels of radon increase the risk of developing lung cancer. If you and your children are exposed to cigarette smoke *and* elevated radon, the risk of lung cancer is even higher.

Use a simple, three-month radon test kit to find out the radon level in your home. You can buy a test kit at some hardware stores or online.

If the test shows you have a high radon level, visit reduceradon.ca to find out what you or your landlord can do.

Do not allow anyone to smoke inside your home.
