

## 2-D Shapes - 4 In a Row

Roll one die. If you roll 2 to 5, you place a chip on the board for the shape that goes with your number. If you roll a 1, you miss a turn. If you roll a 6, you get to put your chip anywhere you want. When you place a chip, say something special about your shape. (name, number of sides or vertices, flat or round edges, etc.) The first person to get 4 in a row wins!

2		3		4		5
