UNB Fredericton

SVHS Outreach Experiment May 14th, 2013: Polyprotic Titration

Permission Slip Information

The Polyprotic Titration experiment involves the use of dilute solutions of sodium hydroxide and phosphoric acid. The experiment will be performed by the students under the supervision of Dr. Andreas Decken and Dr. James Tait from the Department of Chemistry at UNB Fredericton. Safety goggles, gloves and laboratory coats will be provided to the students. The students are expected to wear clothing that minimizes exposed skin, and also closed-toed shoes. Students that are not appropriately attired to work in a chemistry laboratory will not be permitted to perform the experiment because of concern for their safety. A version of this experiment has been previously performed by approximately 600 Chemistry 1017 and 1987 students during the Winter 2012 semester.

Parent/Guardian Consent

Name of Student _____

I hereby consent to allow the UNB Department of Chemistry to take photos of the above noted child for UNB promotional purposes.

Signature: _____

Date: _____
